

Ali latch
SERIES

Ali Latch Series

The ali latch has been specifically designed for narrow stile doors. It has just a 28mm backset and is only 46mm overall, making it ideal for aluminium sections.

The latch body is reinforced with hardened steel pins for extra strength and durability; the anti-thrust pin ensures it is dead latched once the door is closed. The ali-latch is compatible with third-party electric strikes where remote access may be required.

2000 ECP
SERIES

BL2000 ECP Series

The BL2201 ECP acts as our entry level lock, providing access control for situations where entrance needs to be restricted. Fully mechanical and with a simplistic design, the model provides automatic locking until such a time that the correct code is entered.

This lock is cycle tested to 50,000 operations and is suited for internal doors where unauthorised entry is risk. This particular model can come fitted with a holdback function, allowing the door to be locked open for situations that demand free movement. This keypad is ideal for light duty, access control solutions and is suited for internal wooden or composite doors.

**2400 ECP
SERIES**

BL2400 ECP Series

The BL2400 ECP series represents a medium duty range of access control devices for situations where a knob turn keypad may not be suitable. As with all of our ECP range, this comes with on the door code change, allowing a fast recode without the stress of having to remove the keypad from the door.

This comes with an option to have a holdback function on the inside handle (single sided models only) and comes with a free turning handle until such a time that the correct code is entered into the device. This lock acts as a direct lever handle upgrade to any 130mm centre digital push button lock.

BL2600 ECP Series

The Marine Grade series offers a comprehensive range of mechanical access control solutions that have been specifically developed for marine applications whereby compliance to the ISPS code is required.

Boasting our new MG Pro 2 marine grade finish, this improved material provides increased protection against saltwater corrosion as well as greater UV resistance. The BL2600 ECP series has numerous different variants available, allowing keypads to be fitted onto a wider range of different external applications.

SERIES**

BL3000 ECP Series

Designed as a compact access control for box section metal gates, the 'mini' ECP range provides the ideal solution. Currently on the market are two options; the BL3030 ECP with back to back keypads or the BL3080 ECP with a keypad one side and a push or pull pad on the other.

The 'Mini' gate locks are supplied with "on the door" code change button, allowing a quick but secure code change without the hassle of removal. The locks are suited for 30-60mm box section gates and comes with the relevant M8 fixing bolts. The standard fixing centres are 122mm but an adaptor plate is available when retro fitting to gates with 140mm centres.

7000 ECP
SERIES

BL7000 MG Pro ECP Series

The BL7000 is an established and reliable, heavy duty lock designed for industrial and high traffic areas. This comes with on the door code changing, available from the inside handle and the ability to put it into a free passage mode. This has a black, MG Pro finish for external fittings, creating a unit that has strong UV protection and is salt spray tested for 1000 hours.

Available with a wide range of different latch and lockcase solutions, as well as a modification available for the handle to turn it into a knob turn. The keypad is suitable for external applications and boasts a 100,000 cycle test, proving its strength and reliability. Designed to act as a retrofit upgrade of the BL5000 series as well as the Unican 1000 & 5000 models.
